

# Website & App Security Checklist

8 essential steps to ensure your website or app is secure from hackers.

01.

## Get a pentest

Annual penetration test conducted by an independent third party.

Yearly

02.

## Review CMS access

Check admin permissions and downgrade and spring clean where possible.

Quarterly

03.

## Check if you've been pwned

Search for compromised email addresses at [haveibeenpwned.com](https://haveibeenpwned.com).

6 Months

04.

## Use 2 factor authentication

Add an extra layer of security with authenticator apps.

Always

05.

## Use a password manager

Store passwords securely and auto-fill credentials. We use [1Password](#).

Always

06.

## Set password standards

Mix uppercase, lowercase, numbers, and special characters.

Always

07.

## Use a VPN on public networks

Encrypt connections on unsecured public Wi-Fi.

Always

08.

## Keep everything updated

Install the latest security updates and patches.

Always
